2	SYNOPSIS	2

1 NAME

OpenSLX::OSSetup::MetaPackager::Base - the base class for all OSSetup::MetaPackagers

2 SYNOPSIS

```
package OpenSLX::OSSetup::MetaPackager::coolnewpkg;

use vars qw(@ISA $VERSION);
@ISA = ('OpenSLX::OSSetup::MetaPackager::Base');
$VERSION = 1.01;

use coolnewpkg;

sub new
{
    my $class = shift;
    my $self = {};
    return bless $self, $class;
}

# override all methods of OpenSLX::OSSetup::MetaPackager::Base in order to
# implement the support for a new meta-packager
...
```

*The synopsis above outlines a class that implements a OSSetup::MetaPackager for the (imaginary) meta-packager **coolnewpkg***
