2	SYNOPSIS	2

1 NAME

OpenSLX::OSSetup::Packager::Base - the base class for all OSSetup::Packagers

2 SYNOPSIS

```
package OpenSLX::OSSetup::Packager::coolnewpkg;

use vars qw(@ISA $VERSION);
@ISA = ('OpenSLX::OSSetup::Packager::Base');
$VERSION = 1.01;

use coolnewpkg;

sub new
{
    my $class = shift;
    my $self = {};
    return bless $self, $class;
}

# override all methods of OpenSLX::OSSetup::Packager::Base in order to
# implement the support for a new packager
...
```

*The synopsis above outlines a class that implements a OSSetup::Packager for the (imaginary) packager **coolnewpkg***
