## 1 NAME

OpenSLX::Syscall - provides wrapper functions for syscalls.

## 2 DESCRIPTION

This module exports one wrapper function for each syscall that OpenSLX is using. Each of these functions takes care to load all required Perl-headers before trying to invoke the respective syscall.

## 3 PUBLIC FUNCTIONS

### **enter32BitPersonality()**

Invokes the *personality()* syscall in order to enter the 32-bit personality (PER\_LINUX32).
